Subject: RE: Revised Eisenbarth Data Tables

Good Afternoon Steve,

Thank you for the email. One quick question is there a reference map for sample locations for a visual?

I am also working on comments on the plan and hope to have them to you soon.

Hope all is well!

Thank you,

JJ Justice

Subject: Revised Eisenbarth Data Tables

Rick and Bob,

Attached are the revised results of the Eisenbarth Pad Sampling. Please disregard all previous data tables. Several small errors were made on the previous tables, including typos and the reporting of ND and N/A results. These results now have been quality checked by a third party. Although the results may have changed, the conclusions remain the same. No parameters have been detected above screening values.

In addition, we have added a legend at the bottom of the groundwater results table. This legend includes the meaning of N/A (Not Analyzed due to Insufficient Water). We have also added the source of the OEPA to the data tables. We are planning to have the boring logs, groundwater levels and data along with the remainder of your answers to you on Friday. Please let me know if you have any questions before then.

We look forward to meeting with you on the 22nd.
